

Who owns what?

Co-op equipment vs. member equipment

When a storm damages electrical equipment, who makes the repair depends on who owns it. The co-op repairs everything marked in green. Members are responsible for everything marked in blue and should hire a licensed electrician for those repairs.

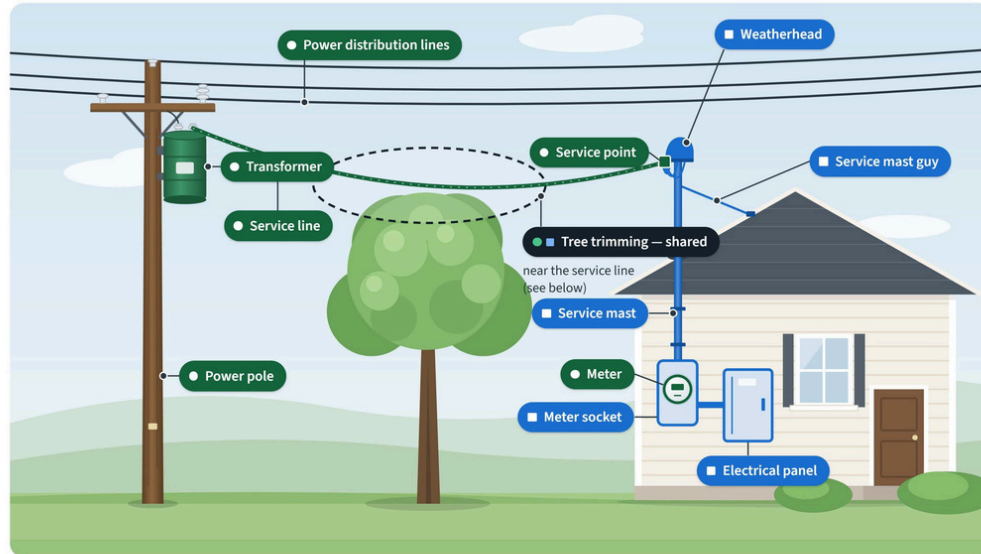

● Co-op owned - we repair

■ Member owned - you repair

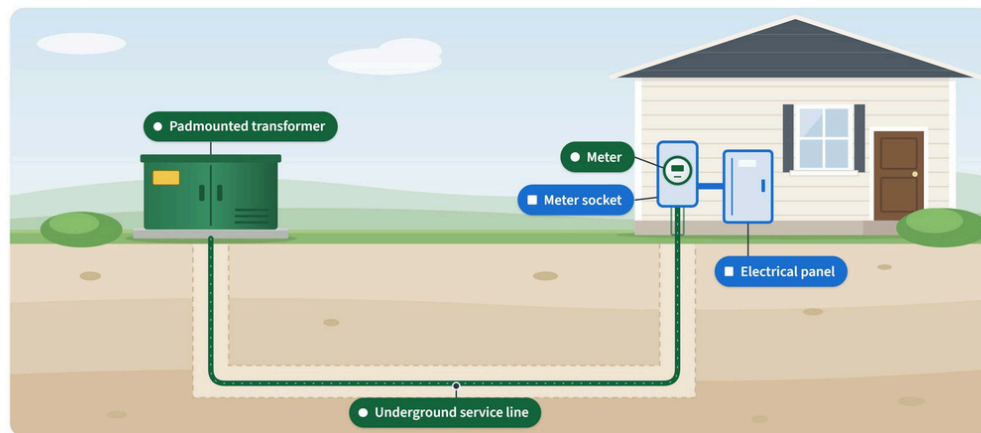

■ Shared

Applies when the meter is mounted on the house.

Overhead service

Underground service

● The co-op owns and repairs

- Power distribution lines
- Power poles
- Transformers (pole-mounted and padmounted)
- Overhead and underground service lines
- The service point connection
- The meter
- Tree trimming around distribution lines

■ You, the member, own and repair

- Weatherhead
- Service mast and mast guy
- Meter socket
- Electrical panel (breaker box)

Always hire a licensed electrician to repair member-owned equipment.

■ Tree trimming near the service line is a shared responsibility

Corridor Energy clears trees around the main distribution lines. Near your home's service line, Corridor Energy may trim branches or disconnect power so members or their contractors can safely remove large limbs or trees. **Never trim near power lines until power is disconnected.**

Storm damage?

Member equipment: call a **licensed electrician**

Co-op equipment: Call 319-377-1587
